Software Developer

Restaurant Web Application (MakeMyDinner.com) – Pune, Maharashtra

August 2015 to February 2016

Pune.

Duration: August 2015 – February 2016

Role: Software Developer

Project Description

The Online Restaurant Application has been designed and developed taking into consideration both the customers and the restaurant management. Of late, there has been a huge competition in the Food Service industry. This competition affects both the management and customers. Keeping in mind the changing scenario, it was decided to create an online system that could cater to the needs of the customers as well as the management. The objective for providing such a system was to provide an excellent service to the customers and a better efficiency for the restaurant staff. It also was also aimed at providing the management a greater return for their investment in the long run.

Some of the salient features of this Application are:

- Manage Orders
- Manage Table Bookings and Status
- Place Orders with the help of interacting menu
- Manage Dinner Sharing with others
- Home Delivery Booking
- Manage Billings
- Manage Waiter Status
- Manage Food Items
